Applied Photography

2017-18

Associate in Arts Degree in Applied Photography

The Photography curriculum is carefully designed to build fundamental technical skills in the operation of 35mm and medium-format cameras, using traditional and digital camera systems. In addition, all classes emphasize the importance of creativity and originality in image-making through a progressive series of conceptual assignments. Basics in digital imaging, editing and creative manipulations, digital printing and color management technologies are provided from entry-level classes and throughout the entire curriculum. The program develops the historic relevance of photography in art and multimedia as well as provides a foundation in creative digital processes that will integrate into the work place. Our digital classroom and darkroom facilities include state-of-the-art service bureau quality equipment and archival printers up to 44" wide to thoroughly prepare students for a variety of job opportunities in the work place.

Careers in Applied Photography

The curriculum is designed to create a balance between technology, design and visual arts as well as provide updated instruction in software applications specific to photography as the hardware and software upgrade and change every six months. These skills will prepare students for jobs in a vast variety of fields both business and art related. Photography supports websites, newsprint, the blogisphere, advertisements and most collateral sales materials.

Note: This degree was first approved by the CCC Chancellor's Office in Spring 2010.
